

**Project Design Phase
Proposed Solution Template**

Date	18-06-2026
Project Name	HouseHunt
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	The house rental and real estate market is highly fragmented – renters, buyers, sellers, landlords, and agents rely on outdated listings, unreliable brokers, and manual processes. This leads to wasted time, hidden costs, fraud risk, and a lack of transparency in finding, renting, buying, or selling a property.
2	Idea / Solution description	HouseHunt is an all-in-one house rental application that brings renters, landlords, buyers, sellers, and agents onto a single digital marketplace. It offers verified, detailed listings, advanced search filters (location, price, amenities), virtual property tours, real-time market insights, in-app communication and negotiation, and support for paperwork – making the entire real estate journey simple and transparent.
3	Novelty / Uniqueness	Unlike single-purpose portals, HouseHunt combines search, negotiation, virtual tours, real-time market data, and paperwork assistance in one app for every stakeholder – renters, buyers, sellers, landlords, and agents. Verified listings and 24/7 accessibility ensure trust and convenience that traditional brokers and classifieds cannot match.
4	Social Impact / Customer	By reducing fraud, hidden fees, and time

	Satisfaction	wasted on physical visits, HouseHunt saves users money and effort while increasing trust in the rental and real estate process. It empowers agents with better marketing tools and helps renters and buyers make confident, well-informed decisions, contributing to a more transparent and efficient housing ecosystem.
5	Business Model (Revenue Model)	Revenue is generated through subscription plans for landlords and agents for premium/featured listings, transaction commissions on successful rentals or sales, paid promotions for listings, advertising from related service providers (movers, interior design, insurance), and value-added services such as digital agreement and verification assistance.
6	Scalability of the Solution	HouseHunt is built on a cloud-based architecture that can scale from a single city to multiple cities and countries with minimal additional infrastructure. The platform can expand into adjacent verticals such as commercial properties, co-living spaces, and vacation rentals, while partnerships with local agents and verification networks allow rapid market expansion.
